

# ANNEX 3: CVA USE/ATTRIBUTION IN UNDERLYING CAUSES

## CONSIDERING & INCORPORATING CVA INTO NUTRITION PROGRAMMING – A 3 STEP DECISION-MAKING TOOL

Evidence only assesses impact of CVA against nutrition outcomes. Hence, despite strong and consistent evidence on CVA positive impact on food security overall, evidence of impact is more mixed when we focus on dietary diversity score. Similarly, CVA impact on health is here only assessed from a nutrition outcomes' perspective, so other potentially positive impacts of CVA on health issues not nutrition-related are not included. See Annex 6 for the full list of Acronyms.
