

## Mapping service providers template

After conducting interviews with service providers, you can fill in the table below to consolidate the information gathered. You can also use geographical maps to locate each service provider and visualize its capacity to reach the affected population. This will be very useful when comparing the cost-efficiency of different modalities and mechanisms, during the response analysis phase. It will serve as preliminary information in the identification and selection of the service providers with whom you will work, during the implementation. It is advisable to triangulate the information gathered from service providers with the information gathered at community level. Try to include informal service providers too.

Name	Services provided	Coverage in the affected areas		Previous experience	Response capacity within xx days	Service costs (fixed, transaction, others)	Support required	Household requirements	Security measures
<i>Name, address and contact number</i>	<i>Mobile transfers, remittances, bank account, etc.</i>	<i>Geographic areas</i>	<i>Number of customers</i>	<i>(Agency/ Year)</i>	<i>(Number of persons)</i>	<i>Value (local currency or US dollars)</i>	<i>HR, liquidity, hardware</i>	<i>(ID, papers, etc.)</i>	<i>Insurance, safety measures, etc.</i>
